VADCO-JAPPO TURNIP FAMOUS NEW VARIETY

Vadco-Jappo Turnip was introduced by us in 1925 and is today the leading and most popular variety in America. It is largely planted by the home gardeners, market gardeners and canning factories and is preferred to all varieties. The leaves grow upright as you will note by the illustration on this page and are the most delicious turnip greens you have ever eaten. It is a rapid grower and the greens are ready for table or market in 30 to 40 days after planting. Vadco-Jappo will grow and make a crop in the hottest and driest weather and is practically free from insect attacks besides blight proof. The roots are very sweet, pure white and almost globe shape. Remember Vadco-Jappo is our introduction and original stock can only be procured direct from us and packed in Van Antwerp's sealed packages and boxes. Be sure to give this world famous turnip a trial this summer or fall. No. 1101.

Reg. U. S. Pat. Off. Applied For

TENDERGREEN should be cooked and prepared for table use in exactly the same manner as Turnip Greens. Tendergreen can also be cooked like Spinach and seasoned with butter and hard boiled eggs.

TENDERGREEN is a delicious new vegetable green introduced by Van Antwerp's Seed Store, Mobile, Alabama, and far superior to Spinach, Turnip Greens, or Mustard in food values.

TIE THIS TAG ON BUNDLE OF GREENS

These Free Tags Help You To Sell TENDERGREEN

These TAGS as illustrated above are sent to you absolutely FREE with your order for TENDERGREEN seed. Your simply tie one of the small tags on each bundle of TENDERGREEN. These tags make your product distinctive and improve the appearance and by the use of them you will get higher prices on the market besides the tag gives information on cooking the new vegetable TENDERGREEN. We send you 100 of these marketing tags with a ¼ lb. of seed, 250 tags with a ½ lb. of seed and 500 tags with each pound of TENDERGREEN seed. In keeping with the progressive policy of the great seed house of Van Antwerp's we are glad to announce that we are the first and only seed firm to inaugurate a special market service as explained here which will assist our customers in marketing the wonderful new vegetable TENDERGREEN. Be sure to take advantage of these FREE TAGS and use them when you market TENDERGREEN.

TENDERGREEN is the first entirely new vegetable introduced in America in many years, and will, we believe revolutionize the markets that now depend on such vegetables as Spinach, Turnip Greens, Kale and Mustard.

TENDERGREEN has a delicious flavor and possesses the outstanding advantages of both Spinach and Turnip Greens. It is the only vegetable ready for table or market in 21 to 25 days after planting, and will produce 5 or more profitable crops a year. TENDERGREEN can be planted nearly every month in the year in the South but best results are obtained during the spring and fall plantings. It withstands extreme weather conditions better than any other vegetable. TENDERGREEN is handsome in appearance; with large, oblong-shaped, dark green leaves and a small center rib. TENDERGREEN contains the following mineral and other body essentials—Protein 22.81 per cent, Mineral matter 25.01 per cent, Lime 2.10 per cent, Iron 0.11 per cent, Water 2.45 per cent (this analysis made by the Alabama Polytechnic Institute, Auburn, Alabama). No experience is necessary to plant, cultivate and market a profitable crop of Van Antwerp's Tendergreen. Use about 800 lbs. of 8-4-4 or equally good chemical fertilizer to an acre. The seed can be sown by hand or for large plantings with a regular Planet Jr. seeder. Make rows 2½ to 3 feet apart, using a turn plough, and flatten rows with harrow and slide drag. Sow at the rate of 5 lbs. of TENDERGREEN seed to the acre in drills. A row 100 feet long will produce 40 to 50 bundles and an acre of TENDERGREEN should yield 2,500 to 3,500 bundles, depending of course on cultivation and weather conditions. Local markets will buy quantities of TENDERGREEN once this vegetable is better known.

We anticipate many infringements on our introduction and U. S. Registration of TENDERGREEN; therefore as a protection to our customers TENDERGREEN will only be sold in sealed packages and bags. Seedsmen and Growers are prohibited from using the name TENDERGREEN or selling Tendergreen unless the seed is purchased direct from us and offered for sale in Van Antwerp's original sealed bags. Be sure to try out this new vegetable this fall; it will mean money to you. Our FREE leaflet tells all about this wonderful new vegetable and is sent with all orders.

IMPORTANT BULB NOTICE

The cream of the World's Best Flowering Bulbs are imported each year by Van Antwerp's. These choice bulb roots are shipped us direct from the leading growers in Holland, France, Japan and California, and they usually reach Mobile the latter part of August. This special Fall Catalog is issued in July, although October and November are the best months to plant bulbs in the Southern States. This early issue of our catalog will give our customers and opportunity to make a suitable selection of the bulbs they need for Fall Planting. Don't wait till planting time to send us your bulb order but mail it just as soon as you receive this catalog and we will ship you the bulbs when we receive them from Europe. You will receive them at correct planting time. If you order bulbs and seeds the seeds will be shipped you by return mail and the bulbs later.

How To Grow Bulbs

When planting bulbs in the garden loosen up the soil well. If it is wet or heavy soil, put a handful of sand underneath the bulb for drainage. Bonemeal mixed with the soil or put on the earth over the bulb will assure you of extra fine flowers. For outdoor planting we recommend putting out bulbs in October and November.

Hyacinths, Tulips, Narcissus, and similar large bulbs should be planted from four to six inches deep, smaller bulbs, such as Crocus, three inches deep. Most bulbous flowers bloom in March and April when planted in the Fall.

For house culture there is nothing more beautiful than a bowl of sweet-scented Paper-White Narcissus, California Freesia or Chinese Sacred Lilies. These bulbs can be started indoors in pots of soil, Pebbles or Bulb Fibre.

Van Antwerp's Prepared Bulb Fibre is a complete substitute for soil, scientifically prepared for use in receptacles without drainage. It is clean and odorless; no saucers necessary, no fear of staining the woodwork or table coverings. And bulbs really grow better in it than in soil, for it absorbs and holds even moisture, and on account of its fluffiness allows the roots to penetrate freely.

Van Antwerp's Exhibition Hyacinth Bulbs

This size of bulb is known as "top-roots," the largest size of Hyacinths imported into this country from Holland. They are the bulbs that are grown for those massive spikes of bloom you see exhibited at National Flower Shows.
